

REMARKS

The claims in this case were restricted into three Groups. Applicants have provisionally elected Group I, Claims 1-48 and 55. The Restriction Requirement is traversed.

For restriction to be proper, a burden must be placed on the Office in examining all claims. Applicants respectfully submit that assuming the compositions in Group I and the methods in Group II and the kits in Group III are materially different, the search for these compositions, kits and methods would occur in the same classes/subclasses given the fact that the compositions in Group I compositions are essentially the same compositions used in the Group II methods and Group III kits. Thus, the same classes/subclasses would be searched because the same compositions are relevant to Group I, Group II and Group III claims -- no burden would be placed on the Office in searching and/or examining all claims together. This is particularly true given that the Group II method claims and Group III kit claims depend from the Group I composition claims. Pursuant to MPEP § 821.04, such dependent method claims should be rejoined in this application upon indication of allowable subject matter. Accordingly, the Restriction Requirement is traversed.

Moreover, Applicants have provisionally elected, for search and examination purposes only, the species of 2H-naptho[2,1-b]pyran of formula (I), particularly the compound where R₁ and R₇ are hydrogen and R₅ and R₆ are the saturated cyclic aminoaryl group of formula (IIA), particularly the compound in which X represents a saturated five-member, nitrogen-containing ring in the saturated cyclic aminoaryl group of formula (IIA) (first dye) and of multilayer interference structure comprising MgF₂ (goniochromatic coloring agent). However, the election of species requirement is traversed.

Application No. 10/687,632
Response to Requirement for Restriction/Election of Species
Dated January 10, 2007

The reason underlying the designation by the Office of the different dyes and gonichromatic coloring agents as being patentably distinct is not explained in sufficient detail or by example, and as such represents only a conclusion, particularly in view of the fact that the identified species are related by operation and/or effect. Accordingly, division of each of these species is unsupported and improper. See, MPEP §§ 802.01 and 806.04 (b).

Moreover, for an Election of Species requirement to be proper, a burden must be placed on the Office in examining all species. Applicants respectfully submit that no such burden exists in this case.

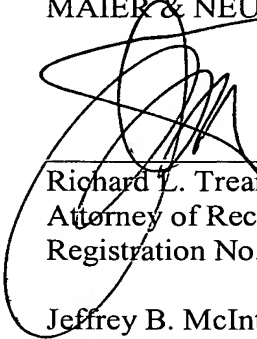

Applicants respectfully submit that even assuming for the purposes of argument that the dyes and goniochromatic coloring agents are materially different from each other, the search for all such dyes and coloring agents would occur in the same classes/subclasses. Thus, no burden would be placed on the Office in searching and/or examining all claims together. Accordingly, the Election of Species Requirement is traversed.

Application No. 10/687,632
Response to Requirement for Restriction/Election of Species
Dated January 10, 2007

Applicants respectfully submit that the above-identified application is now in
condition for examination on the merits.

Respectfully submitted,

OBLON, SPIVAK, McCLELLAND,
MAIER & NEUSTADT, P.C.
